

ABHINAV SANKAR

Full Stack Developer

Thrissur, Kerala | 6238505168 | abhinavsankar27@gmail.com

[linkedin.com/in/theabhinavsankar](https://www.linkedin.com/in/theabhinavsankar) | github.com/abhinavsankar27-bot | abhinavsankar-portfolio.vercel.app

PROFESSIONAL SUMMARY

Frontend-focused Full Stack Developer specializing in React and modern JavaScript, with end-to-end experience building production-style web applications using Node.js, Python/Flask, and MongoDB/MySQL. Delivers accessible, resilient UIs backed by well-structured REST APIs, with hands-on exposure to cloud deployment (AWS, Docker) and event-driven architecture (RabbitMQ). Currently pursuing an MCA in Cloud Computing to deepen scalable systems design skills.

CORE SKILLS

Frontend: React, Next.js, JavaScript (ES6+), HTML5, CSS3, Responsive & Accessible (WCAG 2.1) Design

Backend: Node.js, Express.js, Python, Flask, REST APIs, MySQL, MongoDB, RabbitMQ

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Vercel, Netlify, Linux/CLI

Tools & Other: Git/GitHub, Figma, Postman, VS Code, Machine Learning (Python)

PROJECTS

EventBOOK — Full-Stack Event Booking Platform

GitHub: github.com/abhinavsankar27-bot/EventBOOK

Stack: *React (Vite), Python, Flask, MongoDB, REST API, RBAC, Figma*

- Built a full-stack event booking platform from scratch, designing distinct user and organizer roles with tailored UI flows and permissions enforced end-to-end through the Flask backend.
- Implemented Role-Based Access Control (RBAC) to securely separate booking actions from organizer-level management functions, reducing unauthorized access paths.
- Engineered a real-time Organizer Dashboard on MongoDB for live booking management, enabling organizers to track capacity and attendance without manual refreshes.
- Designed RESTful API endpoints with structured error handling, loading states, and fallback UI, improving reliability for users during network or booking failures.

Smart E-Commerce Checkout Workflow — Full Stack

GitHub: github.com/abhinavsankar27-bot/E-commerce

Stack: *Node.js, Express.js, MySQL, RabbitMQ, JavaScript, CSS3, Figma*

- Architected a service-based backend (Inventory, Cart, Discount, Payment) using Node.js/Express.js and MySQL, isolating transactional workloads for easier scaling and maintenance.
- Integrated RabbitMQ for asynchronous, event-driven communication between services, decoupling payment processing from order fulfilment to improve fault tolerance.
- Built a multi-step React checkout flow with inline validation and real-time inventory/payment status, reducing user drop-off from unclear checkout states.
- Standardized REST API responses with consistent error codes and async feedback patterns (skeleton loaders, user-friendly error messages) across all services.

Flight Price Predictor — ML-Powered Web App

GitHub: github.com/abhinavsankar27-bot/Flight-Price-Predictor

Stack: *Python, Machine Learning, JavaScript, HTML5, CSS3, REST API, Figma*

- Developed and trained a Python machine learning model to predict flight prices, exposing predictions via a REST API consumed by a JavaScript frontend.
- Built a responsive, accessible HTML5/CSS3 interface meeting WCAG 2.1 AA standards with ARIA labels, keyboard navigation, and visible focus states.

- Designed a progressive-disclosure input flow for multi-parameter search (airline, route, date, stops), simplifying data entry while preserving prediction accuracy.
- Implemented real-time UI feedback — loading animations, result cards, and error fallbacks — to clearly communicate async API states to users.

EDUCATION

Master of Computer Applications (MCA) — Cloud Computing 2025 – Present

LEAD College, Kerala

Bachelor of Computer Applications (BCA) 2022 – 2025

Tharananellur Arts and Science College, Kerala

CERTIFICATIONS

- React — Frontend Development
- Flutter — Cross-Platform Mobile App Development
- Ethical Hacking — Cybersecurity Fundamentals & Penetration Testing
- Internet of Things (IoT) — Connected Systems & Embedded Device Programming

ACHIEVEMENTS

- Zomathon — The Data Hackathon (Coding Ninjas x Eternal/Zomato): Competed in a data-focused hackathon, applying analytical thinking and collaborative problem-solving to real-world data challenges.
- Vibe Coding Hackathon — GetWork.ai (2025): Built and deployed a full-stack AI application under strict time constraints, demonstrating rapid engineering decisions and end-to-end delivery.
- 6+ full-stack projects publicly documented on GitHub with consistent version control, clean code practices, and architecture/API documentation.
