

ABHINAV SANKAR

Full Stack Developer | React.js | Node.js | Python | MongoDB | REST APIs

Thrissur, Kerala | abhinavsankar27@gmail.com | linkedin.com/in/abhinav-sankar | github.com/abhinavsankar27-bot

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building end-to-end web applications using React.js, Node.js, Python/Flask, and MongoDB. Skilled in designing and consuming RESTful APIs, implementing role-based access control, and architecting service-based backends. Brings a strong eye for UI/UX, enabling delivery of clean, accessible, and performant interfaces alongside robust server-side logic. Passionate about solving real-world problems through well-engineered, full-cycle digital products.

CORE SKILLS & TOOLS

Frontend: React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Flexbox, CSS Grid, Responsive Design, Accessibility (WCAG / ARIA)

Backend: Node.js, Express.js, Python, Flask, REST API Design, RabbitMQ, MySQL, MongoDB, Role-Based Access Control (RBAC)

Tools: Figma, VS Code, Git, GitHub, Postman, Chrome DevTools, REST API Integration, Machine Learning (Python)

FEATURED PROJECTS

EventBOOK — Full-Stack Event Booking Platform | github.com/abhinavsankar27-bot/EventBOOK

React.js (Vite) | Python / Flask | MongoDB | Custom CSS | Figma | REST API | Role-Based Access Control

- Built a full-stack event booking platform with React.js (Vite) frontend and Python/Flask REST API backend, supporting distinct user and organizer roles.
- Implemented RBAC in React.js with differentiated permissions and UI flows for users versus organizers, enforced via the Flask backend.
- Integrated MongoDB for persistent data storage, powering a real-time Organizer Dashboard with live booking management.
- Designed and consumed RESTful API endpoints with structured error handling, loading states, and fallback UI patterns for a resilient user experience.

Smart E-Commerce Checkout Workflow — Full Stack | github.com/abhinavsankar27-bot/E-commerce

Node.js | Express.js | MySQL | RabbitMQ | JavaScript | CSS3 | Figma | REST API

- Architected a service-based backend (Inventory → Cart → Discount → Payment → RabbitMQ) using Node.js and Express.js with MySQL for transactional data.
- Integrated RabbitMQ for async event-driven communication between services, decoupling payment processing from order fulfilment.
- Built a multi-step React.js checkout frontend with inline validation, progress indicators, and real-time inventory and payment state reflected from the API.
- Structured REST API responses with consistent error codes and async feedback patterns (skeleton loaders, user-friendly messages) for a seamless frontend experience.

Flight Price Predictor — ML-Powered Web App | github.com/abhinavsankar27-bot/Flight-Price-Predictor-

JavaScript | Python | HTML5 | CSS3 | Machine Learning | REST API | Figma

- Developed a Python-based ML model to predict flight prices and exposed it as a REST API endpoint consumed by the JavaScript frontend.
- Built a responsive HTML5/CSS3 frontend with accessible form controls (ARIA labels, keyboard navigation, focus states) meeting WCAG 2.1 AA standards.
- Handled multi-parameter inputs (airline, route, date, stops) with progressive disclosure UI, reducing form complexity and improving data accuracy.
- Implemented real-time UI feedback (loading animations, result cards, error fallbacks) to communicate async API response states to the user.

EDUCATION

Master of Computer Applications (MCA) — Cloud Computing
LEAD College, Kerala

2025 – Present

Bachelor of Computer Applications (BCA)
Tharananellur Arts and Science College, Kerala

2022 – 2025

CERTIFICATIONS

- **Responsive Web Design Certification** — freeCodeCamp *(Completed)*
- **Fundamentals of Digital Marketing** — Google Digital Garage *(Completed)*
- **JavaScript Algorithms and Data Structures** — freeCodeCamp *(In Progress)*
- **Cloud Computing Foundations** — LEAD College, Kerala *(In Progress)*

ACHIEVEMENTS

- Vibe Coding Hackathon — GetWork.ai (2025): Built and deployed a full-stack AI application under competition constraints, demonstrating rapid engineering decision-making and end-to-end product delivery.
- Published 6+ full-stack projects on GitHub with consistent version control, clean code, and documentation covering architecture, API design, and deployment.
